GS4-LEV

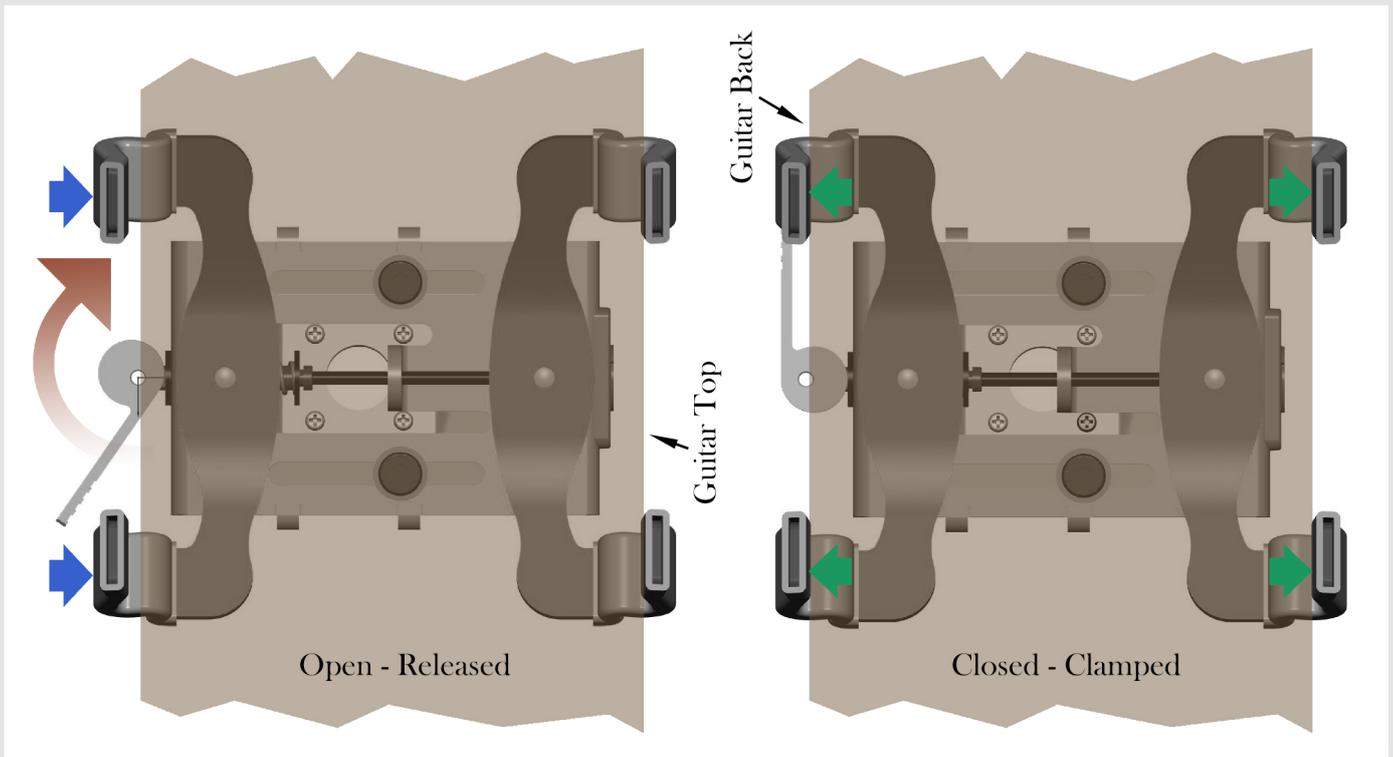

The same great features of the Woodside GS4-LEV in a professional version

- * Includes all custom fitting accessories
- * Exclusive professional grade "locking" collar
- * New ultra-low support height option

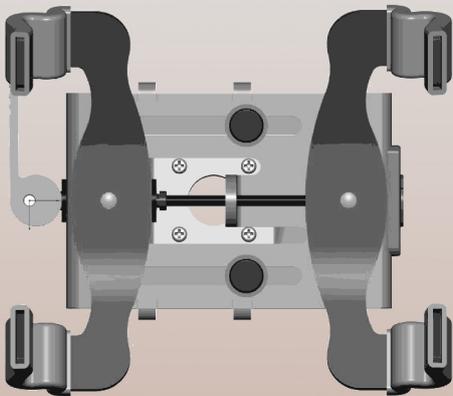

- Quick On / Off Lever Locking
- Ball & Socket Angle Adjustment
- Even-grip Pivoting Grippers
- Set and Forget Personalized Fit

Woodside's Exclusive Flip-Lock Mechanism

Once adjusted for a specific guitar, attaching and detaching is a “snap”! No more fumbling around with suction cups or twisting screws endlessly - attaches and detaches in mere seconds! Quick, convenient, and reliable.

Woodside's Unique Pivoting-Gripper System

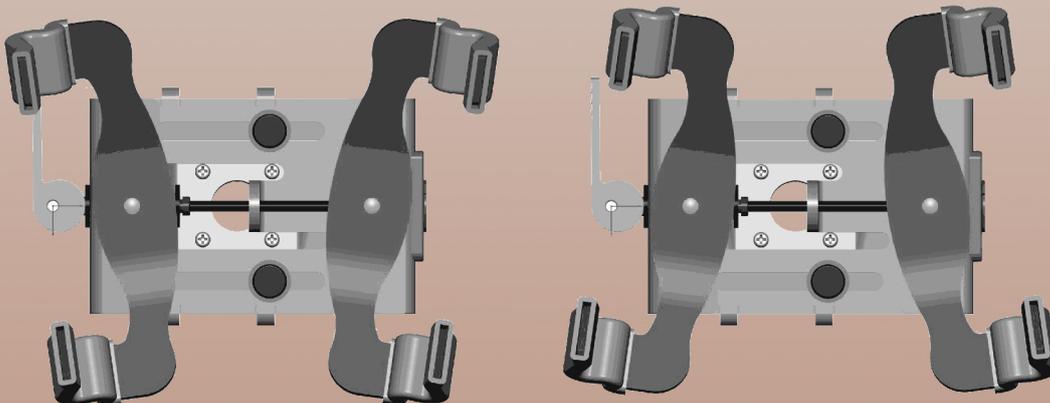

A casual observation of the cradle gripping system suggests that the grippers are parallel to one another, and likewise the top and back of the guitar are parallel.

But in actual real-world use, any manufactured product - even the guitar itself, as well as the guitar support - will have minor differences in the span between the two different pairs of grippers.

Our sophisticated system allows the Grippers to “float” - providing superior gripping strength with minimal pressure.

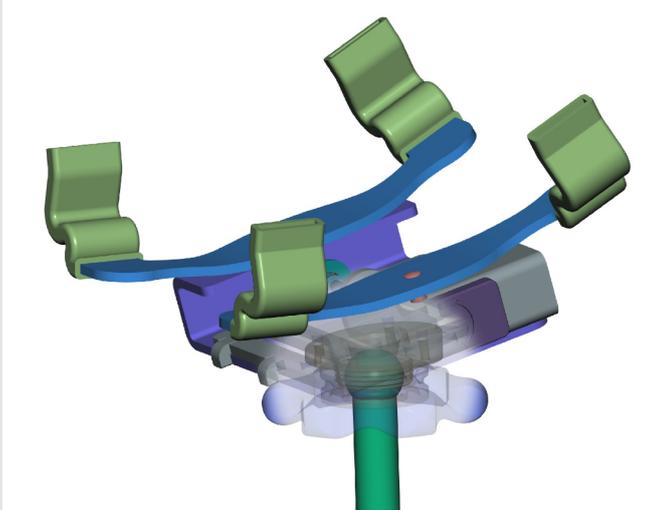

This also allows the Woodside system to work with elevated fingerboard guitars and other non-parallel top/back instruments.

This exaggerated view helps show how the system works. In actual practice the grippers need only rotate a small amount to provide for essentially equal and balanced gripping pressure at all four contact points.

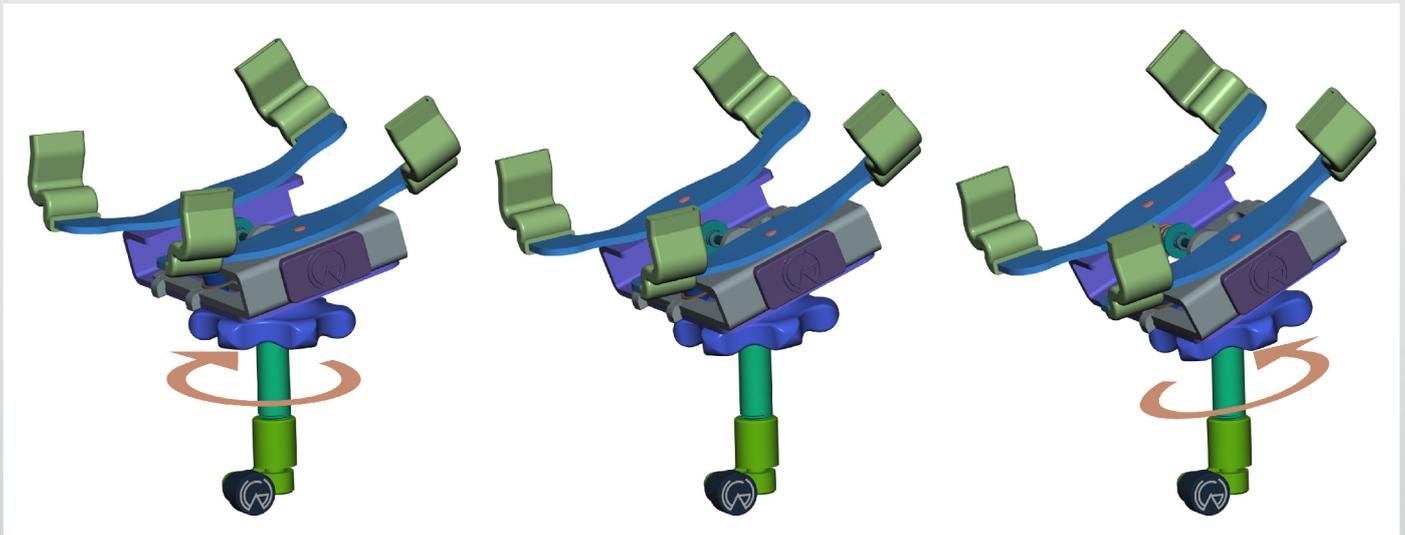

Woodside's Ball & Socket Cradle Mount

Allows precise and versatile positioning options - "Set it and Forget It"

Another innovation exclusive to the Woodside, and yet essential in providing the most intimacy and personalized positioning, is the ball & socket mount between the cradle and support pillar.

Providing 0-13° off neutral position in any axis, the guitar can be angled in countless configurations. Once the player's comfort zone is found, simply lock the retaining cup and the position will be held for the next session - even if the support is removed from the guitar.

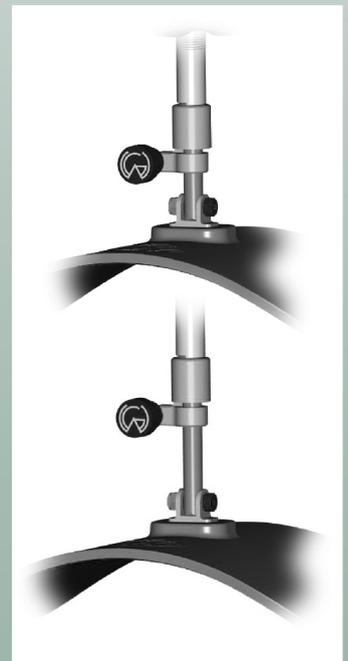

New - Exclusive to "Pro" - Professional Grade Locking Collar

The new, professional grade locking collar is ultra precise, and extremely stable. Building upon the flexibility - such as the freedom of rotation while playing the guitar - and adding even more stability to the system is the newest locking collar system.

Also, the newly designed collar extenders make large height adjustments even easier and more convenient.

Like never before, flexibility and stability come together. Like no other guitar support, the Woodside brings the guitar and guitar player ever closer, enabling the player to achieve their full artistic potential.

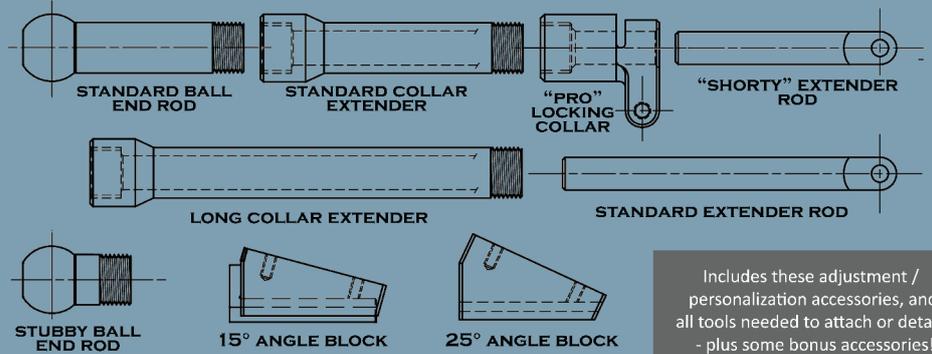

The GS4-LEV Pro comes with the widest range of fitting setup accessories and tools needed for setup.

Secure, stable, adaptable. Your music, your guitar, your playing position!

PRO PACKAGE - INCLUDING FULL SETUP ACCESSORIES

Includes these adjustment / personalization accessories, and all tools needed to attach or detach - plus some bonus accessories!

Shortest setup,... or Tallest (additional extenders available)

Minimal or modest inclination angle.... or maximum angular bias.
